

Pathfind on Macs

Because of security concerns, web browsers for Macs have disabled copy and paste for Java applets. Mac users cannot paste or copy the data for the CPM assignment.

Here is what to do:

Download the Pathfind program by going to this web link:

<http://sambaker.com/courses/J716/pathfind.zip>

Save the file. Move it to your Downloads folder, if it is not there already.

Double-click on the zip file. It will unpack. You will then have a pathfind folder in your Downloads folder.

Open the pathfind folder. Double-click bat.command. That will open a Terminal window and two Appletviewer windows.

Go to your spreadsheet and copy the cells that have your node numbers.

Find the window titled "Appletviewer: MacPathfind.class." It's the smaller of the two applet windows.

Click in the upper box and press Command+V to paste there what you copied.

Click the b. button.

Command+C copies the new contents of the upper box.

Switch to the "Appletviewer: Pathfind.class" window.

Paste into the upper box.

Click the 3. button.

Command+C copies the reply for pasting into your spreadsheet.

You can now close the applet windows and the terminal window.

The pathfind program is my gift to you, subject to the following license.
